INTRODUCTION

This document contains the derived General Quality Assessment (GQA) of the rivers in Dales Area for the year 1998. The grade is based on an amalgamation of three years data and thus reflects the river chemistry over the period 1996-8. The parameters used in the classification are Biochemical Oxygen Demand (BOD), Dissolved Oxygen (DO) and Ammonia and a monitoring frequency of at least monthly is preferred.

The GQA results have been calculated by the National Centre for Environmental Data and Surveillance at Twerton. There have been some discrepancies between their database of sites and ours, always a problem when such huge blocks of information are transmitted backwards and forwards. This resulted in no GQA grade being calculated for some sites. Where this has occurred I have filled in the missing grade by calculating it locally. In such circumstances this is identified by the grade being represented in **lower case**.

You will notice that this document is slightly different to those produced in previous years in that it does not contain any maps. There are a number of reasons for this but primarily it was decided to disseminate the tabular information rapidly after it's return from the national centre out to the areas and produce a more in depth analysis of the information later on in the year.

Extra columns have been included to show the GQA grade for 1990 and 1995, as well as last years information. This allows for some long term comparisons to be made but please bear in mind that the sample point locations were revised in 1994 and therefore the 1990 GQA may be somewhat misleading, particularly with respect to the tributaries.

The sample point numbers that have been used are the new WIMS/PREMIS codes, the name of the sample point has been retained to avoid confusion.

RIVER LENGTH SUMMARY 1998

River	GQA A Good	GQA B Good	GQA C Fair	GQA D Fair	GQA E Poor	GQA F Poor	Total (km)
River Tees and Tribs	128.7	209.5	108.3	84.5	79	8.6	618.6
