### 1.1 Background

The Dove Leap Consultation Report was launched for public consultation by the Environment Agency on 4 May 1999. The consultation report and summary leaflets were given to individuals and organisations with the opportunity to comment on the report and on local environmental problems. Written responses were received in a number of formats, including letters, faxes and questionnaires.

#### 1.2 Informal Consultation

In November 1998 the Agency wrote to 166 key groups, local authorities and other representative bodies asking for comments on the Agency's initial list of issues and problems affecting the environment in the area that they considered warranted further action. This consultation was carried out as an information gathering exercise to highlight the issues that should be included within the LEAP. In total 37 replies were received and all comments were considered and where appropriate incorporated into the consultation report.

In addition a sub-group of the Area Environmental Group (AEG) made a valuable contribution to the development of the Consultation Report. The AEG is a local advisory committee made up of individuals who live or work in the Upper Trent area and take a particular interest in LEAPs. The AEG sub-group was formed to consider the LEAP issues and contribute to the development of the consultation report and subsequent action plan. The sub-group consisted of:-

Mr Robert Ball Local Authority

Dr Phillip Bennion Farming
Dr Peter Bottomley Fisheries

Mr Frank Gribble Nature Conservation

#### 1.3 Consultation Launch

The Dove LEAP Consultation Report was launched at Tittesworth Reservoir on the 4 May 1999. The launch marked the start of a three month consultation period which ended on the 13 August 1999. Promotion of the document was by:

- Talks to both public and private organisations.
- Display boards about the LEAP at local library's, and Town Hall's.
- Attending a number of shows, see appendix for further details.
- Press releases.

## 2.1 Responses Received

A total of 53 written responses to the consultation exercise were received ~ 26 letters and 27 questionnaires. The response was encouraging, particularly as those responses received represented a wide cross section of interests. All letters and questionnaires were acknowledged and where needed a detailed response was sent.

All comments have now been considered and where appropriate and practicable included in the Action Plan. During the consultation process and via responses, we received many helpful and welcome suggestions, errors and omissions have also been acknowledged and these are summarised at the end of this report. Above all it is encouraging that so many organisations have expressed a desire to work in partnership to achieve our common objectives.

The consultation process has given the Agency a more comprehensive understanding of the issues and options presented in the LEAP and of the public's concern in the area. It was very clear from the responses received that the issues of Landscape and Ecology in the Dove catchment are key to both local residents and visitors to the area, alongside sustainable riverbank management and biodiversity. Whilst this is a reflection of the predominantly rural nature of the LEAP area, such a response reinforces the importance of conservation measures. The issues have not been prioritised as the Agency considers the delivery of each issue to be equally as important.

The letters and questionnaires raised a number of potential new issues which included:

- The potential of hydro, solar and wind power.
- Commercial water extraction.
- · Reducing water consumption.
- Green Corridors.
- Increased water levels.
- Publicly owned land.
- Flood risk at Marchington.
- · Constant water supply to Caldon Canal from Rudyard Reservoir.
- Waste Management Plans.
- Mineral extraction and its environmental impacts.

The Agency has considered the responses received and the new issues raised. No new issues have been incorporated in to the Dove LEAP Action Plan as they are either already part of the Agency's everyday work or the Agency has limited responsibility or funding available for addressing such issues. Others, such as land ownership issues, are outside the remit of the Agency.

Changes to existing issues are identified in the activity tables in Section 4 of the Action Plan. The plan reflects a balance between the opinions expressed and the need to ensure a feasible and workable plan.

Organication/	Section	Comments	Response.
Anon	General	Fascinating document, which should lead to an improved situation.	Your comment is welcomed.
Mr M Hubbard British Canoe Union West Midlands	General	No mention of Canoeing and Sailing. Canoeing issues and your policy for canoeing are conspicuous by their absence from the whole PLAN. There is no issue "Opportunities for Amenity, Recreation and Navigation", as there is in most other LEAPS. Issue 7 does not really cover it.	Canoeing does not feature in this LEAP as legally canoeing can only be carried out with the river bank owners permission except where there is a right of navigation for canoes. This is not the case on the Dove.
	Issue 7	Issue 7 acknowledges page 41 "the high number of visitors attracted each year" and "increased opportunities for recreation". Your policy INTEGRATED RIVER-BASIN MANAGEMENT clearly states:- Pages 47 & vi "Ensure that all waters are of sustainable quality for all different uses".	Integrated river bank management does cover all legal uses of the river. The Agency supports the making of access agreements between canoe clubs and river bank owners to achieve shared use of rivers.
	Issue 12.2	Without canoeing it is not integrated.  Para 2 The terms "Amenity" and "Navigation" are often interpreted in a narrow sense. I wish to bring to your attention that we should be considered as part of the wider sense.	The terms amenity and navigation in the Dove catchment are quite separate terms. The only right of navigation in the plan area is the Caldon Canal, however there is no right for canoeing.

	7		surface water features, or other lawful water users.
	7 7		Pumping tests undertaken so far in the Ashbourne area
100			

Organisation/ I Section Individual Mr J Connor New Issue	Response would appear to indicate that surface water features
Chairman Clifton Parish Council Continued	were not affected by the pumping of the underlying Sherwood Sandstone, by the large scale commercial abstractions named, although tests are still ongoing to ensure this hypothesis is correct. Calculations
	undertaken by the Agency show that there are sufficient resources available within the immediate Ashbourne area for other potential abstractors such as the farming community, provided that there are no potential adverse effects.
	During drier summer months, or within period of decreased rainfall, overall flows are reduced. It must be appreciated that reduction in surface flows within drier summer months, area result of the natural reduction in baseflow contributions from both
	superficial and deep aquifers, and the seasonal reduction in rainfall. The subsequent reduced surface run-off, are a common feature country-wide, and are not necessarily because of increased abstraction from a aquifer system.
	I do not consider a new issue is required. Nestle and Perrier have "abstraction licences" and will be regularly monitored by Water Resources staff.

Organishtion/	Scenor 1	Continents
English Nature	Issue 2	English Nature recognises the need to protect property
Continued		but would encourage a more holistic approach to flood
		defence that recognises the importance of seasonal
		inundation in maintaining certain habitats. The flood
		alleviation proposals do not appear to have considered
		the importance of this process on habitats such as wet
16		woodland, wet lowland meadows and rush pasture.
		Both wet woodland and lowland meadow are
		considered priorities for conservation under the UK
		Biodiversity Action Plan and rush pasture is important
		for a number of breeding birds such as reed bunting and
		snipe. One of the main causes for the decline of such
ris h		habitats has been a reduction in the duration and
		frequency of seasonal inundation that has resulted from
		flood alleviation schemes (UK Biodiversity Action
		Group Tranche 2 Action Plans, Volume II). We would
	1100	urge that any existing or proposed flood alleviation
		work is preceded by an EIA to identify any significant
		wet woodland and inundation meadow that may be
19.74		present and to assess the likely impact. We would also
		recommend that the impact of any scheme on the
		potential for the creation of such habitats is fully
		assessed, as is the effect of any bank re-profiling or
		channel modifications on water vole and native crayfish
		populations. Additional action points should include
		the production of an audit of seasonally inundated
		habitats, the production of EIA's for the creation or
		uprating of flood defence measures and the
		identification of any important areas that require
		I require a mily miborant mons milt reduite

Your concerns are noted. Any proposed work would involve either raising existing flood embankments or extension of them in certain locations. Such proposals would not affect frequency of seasonal inundation in the reaches in question but we can assure any planned works will involve EIA (Environmental Impact Assessment). With regard to your concern that field drainage works in the upland catchment will result in increased flooding in the lower catchments. The accepted hydrological view is that field drainage improvements in the uplands of a catchment will not affect peak flood flows downstream. Flood flows will be generated predominantly by overland flows

All Agency works including flood defence are subject to the feasibility stage of an EIA, which include consideration of all effects. With flood defence schemes this will clearly include the effect on inundation of other habitats. All the schemes under consideration are to defend villages only, so the effect on the wider flood plain will be to very slightly raise the water levels.

throughout the catchment.

Past land drainage works in upland areas have certainly had severe effects upon the ecology of these areas and may be having an effect on the amplitude of the flooding further down the catchment. However such works are totally outside the control of the Agency. We do have 30 years of rainfall and river

seasonal inundation for waders.

		reference (p77) to the contribution towards the		
. 0.0.		maintenance of Dovedale footpaths.		

Noil Edwards Executive Director The Inland Waterways Association Continued  No reference appears to be made to the Cauldon Canal with respect to flooding in Leek. The present canal stops short of its original terminus and basin in Leek town. Various plans to restore the canal to a new terminus in the town have been proposed in the past but have not progressed. However, a final stretch of canal into the town would be of immense value for both recreation and the town's economy.  A similar situation existed in Chelmsford (Essex) until about 5 years ago, when the National Rivers Authority joined forces with other parties to fund the restoration of the Chelmsford and Blackwater navigation and Springfield Basin into Chelmsford — partly to assist flood defence. The advantage of the restoration now being an additional flood relief channel. Have the Agency investigated whether a similar scheme might work in Leek? Could a restored canal Basin provide additional flood relief capacity? Other parties that could be involved include British Waterways, Caldon	d and accordingly at their restored ief. However your
stops short of its original terminus and basin in Leek town. Various plans to restore the canal to a new terminus in the town have been proposed in the past but have not progressed. However, a final stretch of canal into the town would be of immense value for both recreation and the town's economy.  A similar situation existed in Chelmsford (Essex) until about 5 years ago, when the National Rivers Authority joined forces with other parties to fund the restoration of the Chelmsford and Blackwater navigation and Springfield Basin into Chelmsford — partly to assist flood defence. The advantage of the restoration now being an additional flood relief channel. Have the Agency investigated whether a similar scheme might work in Leek? appear to have been tachtified.	

Oigantsiiton/. Individual		Scattons	Comments - Response - Response
T S Locker	•	General	I believe that if all the issues listed are actioned, we
			may well be on the way to an effective resource
	4.5		management plan. Having prioritised the five issues as
			indicated on the questionnaire, I believe that if
-/-			implemented these will have a positive impact on all the
			other issues in the wider scheme.
			Having worked on many projects relating to river
			management in the Dove catchment I am well aware of
			the problems. The proposals and issues raised and
		**	subsequent solutions and schemes will only work if we
			do it together. We must not pay lip service to public
			opinion; we must listen and reflect. The Agency must
			remember that it acts on behalf of the public and its
•			actions will be measured by future generations.
	k-II	•	actions will be measured by future generations.
		Issue 8	Concerns were expressed at various meetings regarding This is not true. The overwhelming response from
		Issue o	Concerns were expressed at various meetings regarding the introduction of salmon. Though the consensus of public opinion was strongly in favour.
2.			opinion rejected the proposal, the Agency have gone
			ahead and introduced stock to the Dove. Why?  The Agency consulted widely on the issue of re-
			introduction of salmon to the Trent catchment via the
			River Dove. A leaflet was mailed to over 700 angling
			clubs, riparian owners, local authorities, wildlife
		*	trusts, statutory organisations and industry in the
		A.	catchments of the Rivers Dove and Trent. Recipients
12			were also invited to attend public meetings in Burton upon Trent or Nottingham, the dates and details of
			which received widespread media coverage both in
	1.0		local and national newspapers and local radio and
			television.
		<u> </u>	IEIEVISIUI.

Organisation/ a subdividual and transfer of the subdividual an	Section 2	Comments.	Response  Attendees were asked to submit a response form
Continued	Continued		giving an indication of whether they would support the proposals or not and the reason for their decision.
	÷ +		Seventy-one responses were received, 54 in favour, 12 against and 5 neutral. Before implementation, the issue was put before the Regional Fisheries Advisory
9			Committee on 7 January 1998 where it was approved.
			There was consistent opposition to the re-introduction of salmon from fishing interests on the Dove upstream of Rocester. However, the re-introduction of salmon
	* . * 		will impact the whole Trent catchment and needs to be viewed in this context. On that basis the consensus of opinion was to support the issue.
