  - Determinand suites

## **Introduction**

This document presents the Coastal Survey Vessel data from the January / February 1995 baseline survey coordinated by the NRA's National Centre for Instrumentation and Marine Surveillance.

Continuous monitoring data in the form of A1 plots is appended to this report in a separate package. An overview of the QUBIT system and a technical glossary are included herein.

The laboratory information is presented in two forms, plotted as maps and as tabular data. The maps use a minimum reporting limit (set to one tenth of the EQS (Environmental Quality Standard) where there is one), whilst the tables report the values returned from the laboratory.

Because of the poor weather conditions much of the southern area of the United Kingdom was not surveyed during the designated period of January and February. These areas were surveyed during March and April. The data from these two months are not comparable with January and February as they are effectively early Spring rather than Winter. To avoid misleading the reader two sets of maps have been produced, one for January / February and another for March / April. A single table of data is presented, covering the entire survey. This table contains the date of sampling, so the reader can interpret the results on a site by site basis.

More detail of the sampling and analysis procedures can be found in the laboratory data overview. The position of the sites and the suites measured at each site are detailed in the site record at the end of the document.

## **CONTINUOUS MONITORING DATA OVERVIEW**

### **January / February 1995**

The QUBIT system is the on board data gathering system that collects data from the electrochemical and spectral continuous monitoring devices used on board the NRA's coastal survey vessels. The actual determinands measured on each boat can vary, as can the calibration methods and the instruments used to gather them. The NRA is seeking to standardise. The basic determinands (Temperature, Salinity, Dissolved Oxygen, Transmission and Chlorophyll) are measured on all systems. Measurements are recorded every ten seconds along the boat's survey track.

The QUBIT continuous monitoring system's results in the form of A1 plots have been sent separately to this report. They have been annotated with notes that explain the occurrence of unusual data features and missing data. These notes are necessarily technical in nature, so a technical note is included below to aid the reader.

The plots were distributed in the following manner:

Area	Sheet Numbers
Northumbria / Yorkshire	1 - 4
Anglian	5 - 8
Thames	8 - 9
Southern	9 - 13
South Western	13 - 22
Severn Trent	22 - 23
Welsh	23 - 32
North West	32 - 34

**QUBIT CONTINUOUS MONITORING DATA**  
**TECHNICAL GLOSSARY OF TERMS USED ON PLOT SHEET NOTES**

**Aquashuttle (Towfish)** - A platform towed at approx. 4m below the water surface, usually containing the following suite of instruments; temperature, conductivity, depth (upward), dissolved oxygen, pH, transmission, fluorimeter and plankton recorder (Vigilance).

**Profiler** - An instrument used primarily for gathering vertical profile data through the water column, usually down to a depth of 15m, although often used to collect data along the vessel's track as she steams between sample sites. Typical parameters include; temperature, conductivity, depth, pH and dissolved oxygen however transmission and fluorescence may also be included.

**Moon pool** - Refers to a data collection point on the vessel such that an instrument is lowered down a hole cut through the hull allowing data to be collected in-situ at a depth of approx. 1m. The instrument used is usually the profiler.

**Flow cell** - Again refers to a data collection point where by sea water is pumped from a depth of approx. 1m into a container in which the instrument is placed.

**Turner** - The manufacturer's name for a fluorometer. Sea water is pumped by a peristaltic pump from a depth of approx. 1m to the instrument which records the fluorescence which may be used as an estimate only of the amount of chlorophyll *a* present.

**Hydrolab** - The name given to an instrument used on the Sea Vigil where sea water is pumped through a small flow cell containing similar probes to those of the profiler.

**QUBIT (TRAC V)** - The central navigation / data logging computer on board each vessel. Data strings from each water quality instrument are filtered through a QDCF file which converts 'bit' values into engineering readings and merges these files with position data from the GPS (Global Positioning System). At this stage two files are stored down, a RAW DATA file containing all instrument parameters without fine calibration and a QPF file which contains ten selected parameters and has fine calibration applied.

## **LABORATORY DATA OVERVIEW**

### **January / February 1995**

The following data are from water samples taken by the Coastal Survey Vessels from 1 metre depth and sent to NRA laboratories for analysis.

Data from the following determinands has been mapped:

Dissolved metals:	Arsenic Cadmium Chromium Copper Lead Nickel Zinc
Total metals:	Mercury
Nutrients:	Ammonia Nitrite Orthophosphate Silicate Total Oxidised Nitrogen
Chlorophyll a	
Suspended solids:	105°C 500°C organic fraction

Organics (pesticides), where the values found were above the limit of detection

Two NRA National Laboratory Service Laboratories were used. Llanelli Laboratory analysed samples from sites 1 to 137 (please see attached map), and Nottingham Laboratory analysed samples from sites 138 to 186, except total mercury, where the results shown are all from Llanelli Laboratory.

Sampling dates are given above the results columns of the tables. Although this survey was initially called a Winter survey, due to operational difficulties in poor weather conditions the range of dates is great, from 24 January to 7 April, and this has had significant effects on the data, especially on nutrient and chlorophyll values. For this reason, two versions of each map have been plotted, one of samples taken in January and February, the other of samples taken in March and April.

Some changes have been made to site positions in the North West Region (CSV Coastal Guardian) since the last survey. The new positions are given on the site listing (attached).

The determinand codes (left hand column of the results tables) are South Western determinand codes. These differ from those used by the other Regions, and the Laboratories. They can be used when contacting the National Centre with queries or data requests.

A less than sign (<) in results columns indicates that the result obtained was below the limit of detection. The LoD for each determinand is given in the third column of the results tables. The LoD values vary depending on the region, but in general can be equated to 1/10 of the EQS where the determinand has an EQS. Where the laboratory values are less than 1/10 EQS, they have been rounded up, giving a map plot minimum reporting limit of 1/10 EQS. The data in the tables are as received from the laboratories.

The majority of blank squares in the data tables indicate that no analysis was required for this determinand at the site, the remainder are where the required analysis was not possible, usually due to poor weather at the site.

The difference between the two suspended solids values (measured at 105°C (det code 135) and at 500°C (det code 143)) is the organic fraction of the solid matter, and these values have been calculated and plotted, both as a percentage and a real value.

Nottingham Laboratory chlorophyll a values have been corrected for phaeophytin, whereas Llanelli Laboratory chlorophylls have not, and these values are therefore not directly comparable. Future survey data reports should contain values of the same type.

If the data appears to contain any anomalies or unexpected values, these can be checked with the analysing laboratory. Contact the National Centre with the base number, date and determinand code if you require this to be done.

Laboratory data from this survey and previous Baseline Surveys are available in a variety of electronic and hard copy formats upon request. Contact Diana Milner (Data Officer) x4221 or Richard Saull (Data Manager) x4238 at the National Centre for Instrumentation and Marine Surveillance, Bath. (National code 7 27 x or 01278 457333.)

The information provided is based on that currently available to the National Centre: if you have any queries or questions, please contact us.

## Laboratory Maps: January / February 1995

## **Site position record: January / February Survey 1995**

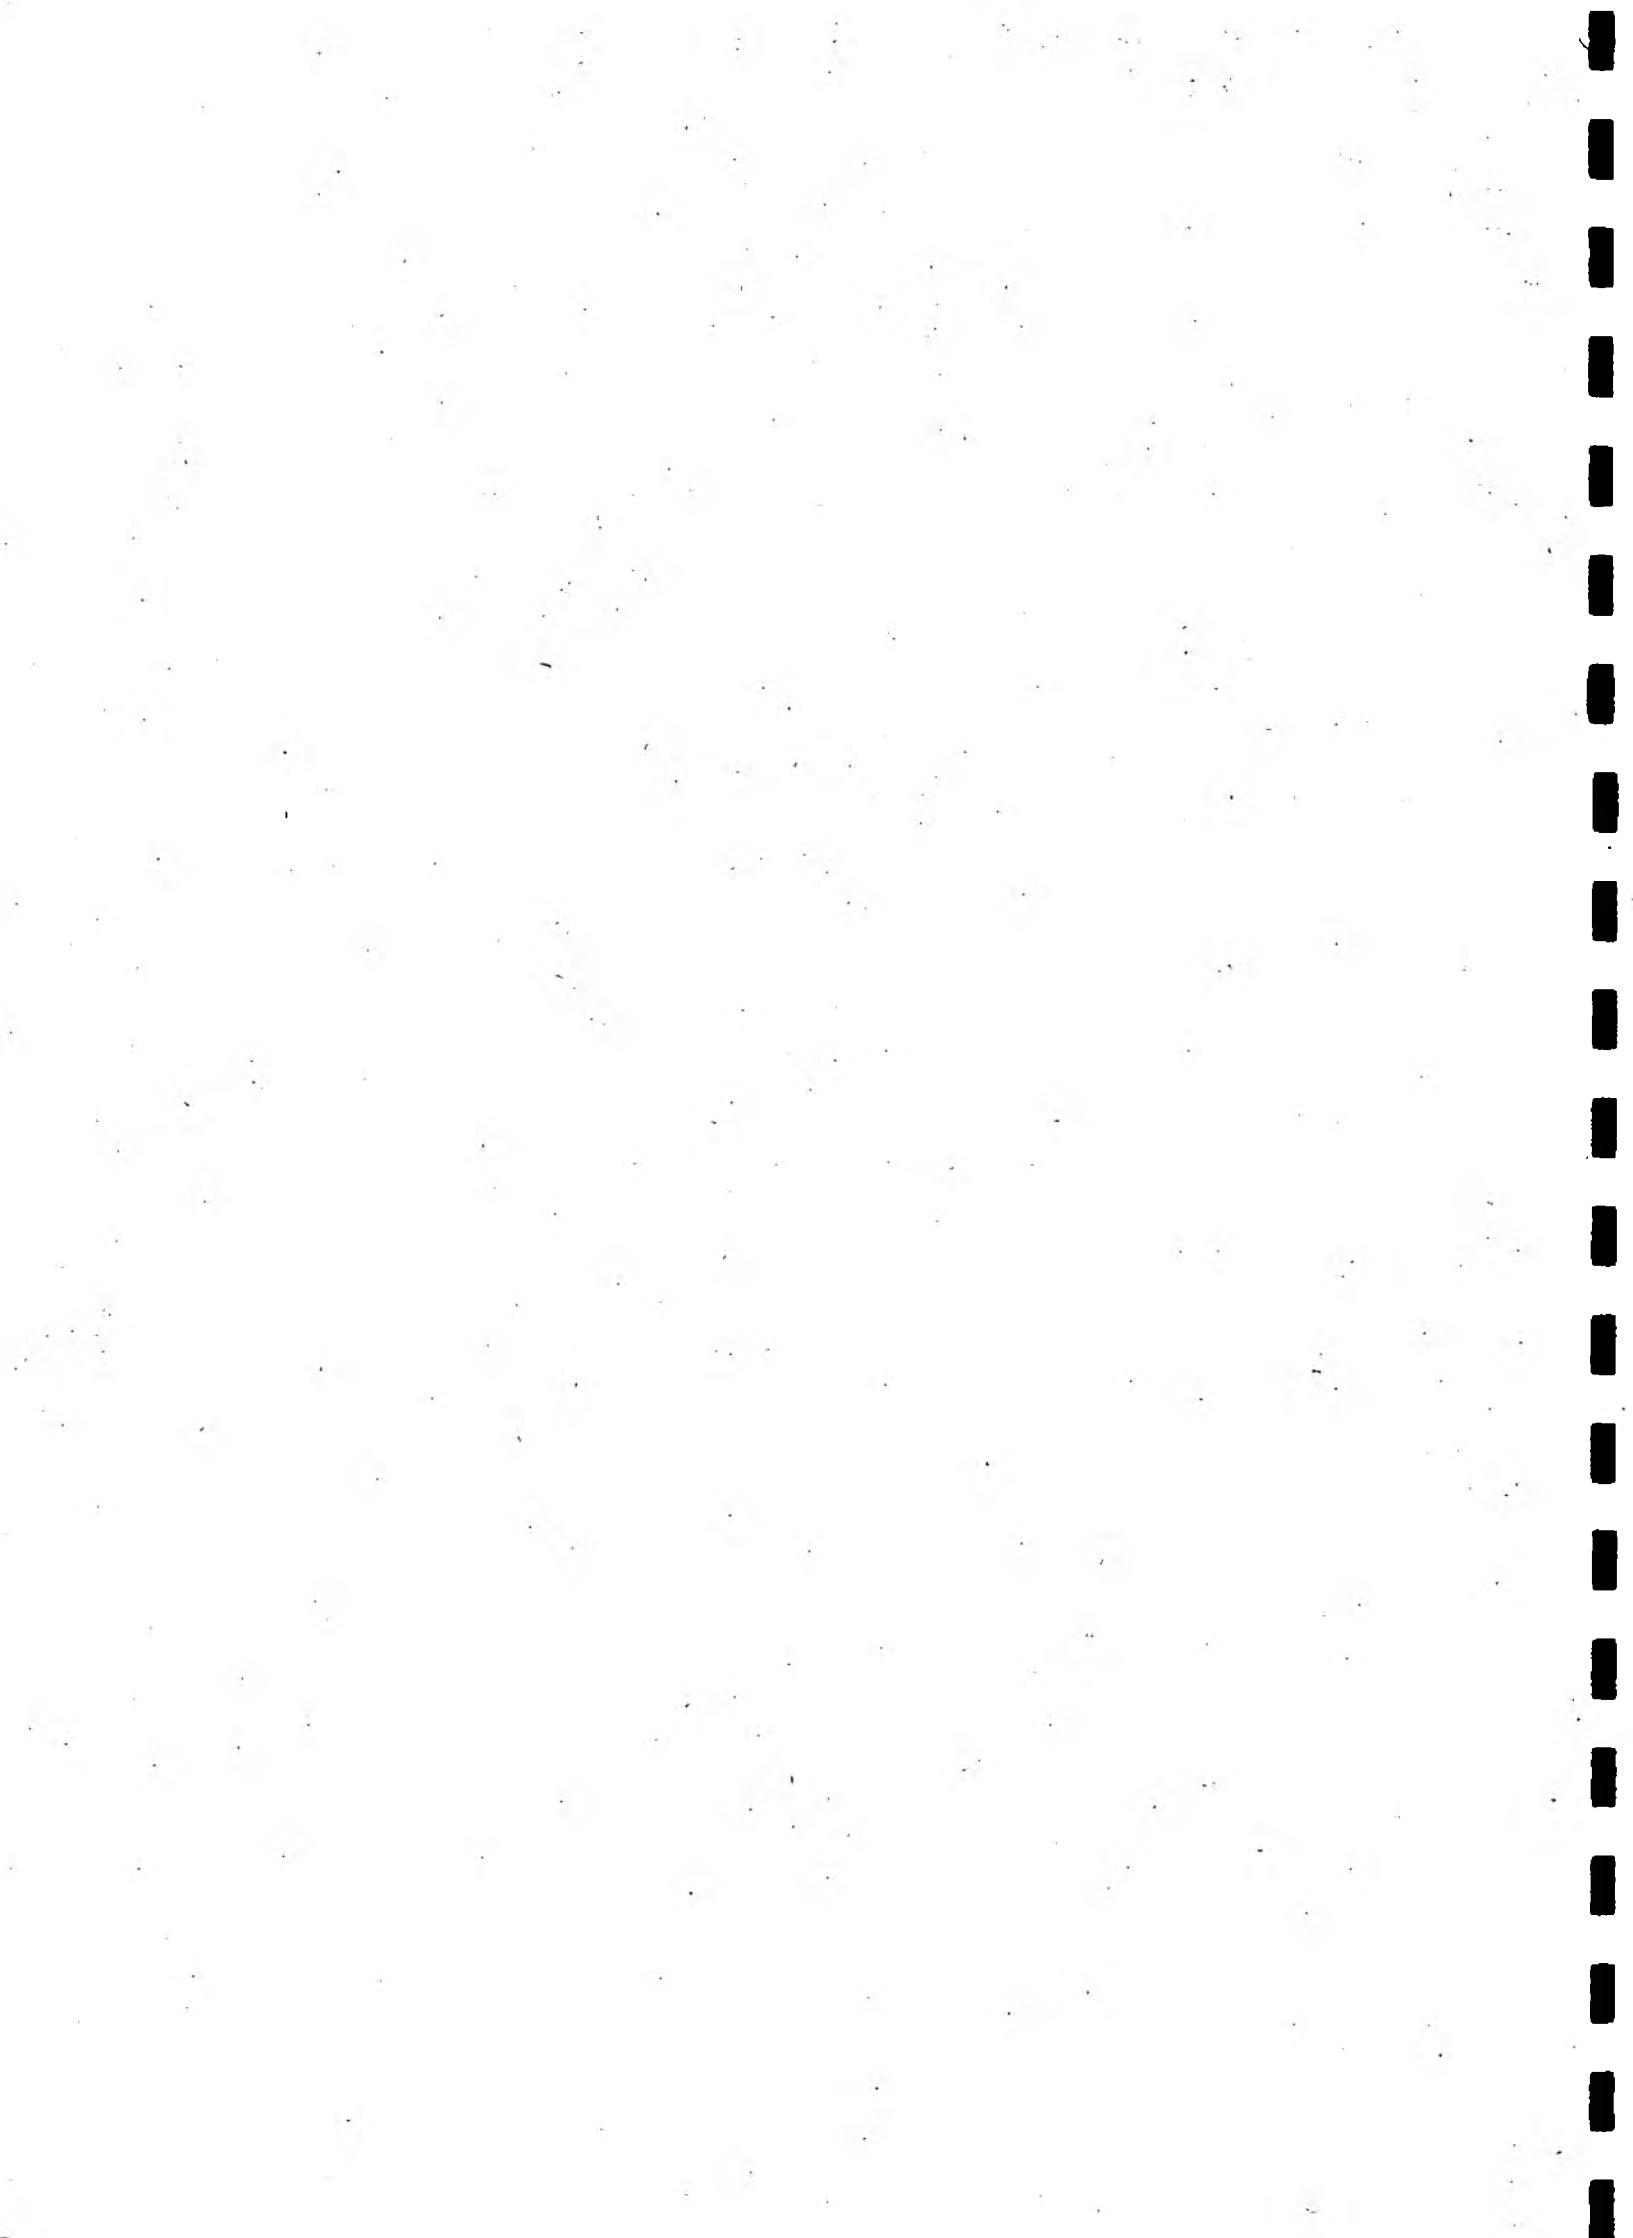

The position of all the laboratory sampling points are shown on a map and listed as Latitude / Longitude pairs. The determinand suites measured at each site are also listed. The determinands that make up each suite are listed in a separate table.

Some new points have been added / amended in this survey:

153.1 is a new site, added by the region and included in this data

163.1 is a new site, added by the region and included in this data

182 is no longer sampled and has been replaced by 180.1

Det Code	Determinand	Units
Group 1 - measured at every baseline site		
105	Mercury Total	ug/l
106	Cadmium Dissolved	ug/l
135	Suspended Solids 105°C	mg/l
143	Suspended Solids 500°C	mg/l
189	Orthophosphate	ug/l P
729	Chlorophyll a	ug/l
3403	Ammonia	ug/l N
3404	Nitrite	ug/l N
3420	Silicate	ug/l Si
7213	Copper Dissolved	ug/l
7230	Lead Dissolved	ug/l
7243	Zinc Dissolved	ug/l
354	Arsenic Dissolved	ug/l
7373	Chromium Dissolved	ug/l
7427	Nickel Dissolved	ug/l
9991	Total Oxidised Nitrogen	ug/l N
Group 2 - measured at approximately every third baseline site		
108	Cadmium Total	ug/l
7215	Copper Total	ug/l
7229	Lead Total	ug/l
7245	Zinc Total	ug/l
7356	Arsenic Total	ug/l
7375	Chromium Total	ug/l
7429	Nickel Total	ug/l
Group 3 - measured at occasional sites of interest		
3081	Isodrin	ug/l
3276	Aldrin	ug/l
3301	Dieldrin	ug/l
3306	Endrin	ug/l
3082	Hexachloro-Benzene	ug/l
3083	Hexachloro-Butadiene	ug/l
3142	PCB 28	ug/l
3145	PCB 52	ug/l
3148	PCB 101	ug/l
3151	PCB 118	ug/l
3154	PCB 138	ug/l
3157	PCB 153	ug/l
3160	PCB 180	ug/l
3294	DDE-PP'	ug/l
3295	DDE-OP'	ug/l
3296	DDT-OP'	ug/l
3297	DDT-PP'	ug/l
3310	HCH-Alpha	ug/l
3311	HCH-Beta	ug/l
3312	HCH-Delta	ug/l
3313	HCH-Gamma	ug/l
3329	TDE-OP'	ug/l
3330	TDE-PP'	ug/l
