RIVER QUALITY REPORT

Period to end of December 1991

Freshwater Rivers Compliance

During the year to the end of December 1991, 568 sites were routinely monitored to assess the quality of 3,820 Km of river. Table 1 gives details of the 85 sites that failed their RQO's representing 500 Km of river (13% of the total). This is a decrease of 150 Km compared to the position shown in the previous report.

Table 2 gives details of the class achieved by all reaches as per previous reports.

Table 2(A) is a matrix showing the total lengths of river in each class against objectives, while Table 2(B) shows this graphically.

78/659/EEC Fisheries Directive Compliance

There are currently 57 sites on river reaches classified as Salmonid and 121 on those classified as Cyprinid. Table 3 shows the 15 sites which failed to meet the relevant standards.

EEC Dangerous Substances Directive

Table 4 gives details of the freshwater river sites that fail parameters assessed under the Dangerous Substances Directive. All parameters are assessed as annual averages.

The Tideway (Tables 5 and 6)

Table 5 details compliance of the three tideway reaches against the quality objectives in the quarter October to December 1991. Part of the middle reach failed to meet its 20 percentile standard for dissolved oxygen.

Table 6 details sites failing the EEC Dangerous Substances Directive in the year to December 1991.

If you have any comments or questions please give me a ring on the above number.
