1. Introduction

This publication is the second produced under the auspice of the National Rivers Authority and continues the series of annual reports of catches of salmon and sea trout established in 1974 by the Welsh Water Authority.

This report brings the series up to date with the 1989 catches of salmon and sea trout by netsmen and anglers in the Welsh Region.

It must be stressed that the number of fish is the declared catch, are minimum figures and therefore should be treated with caution. The figures are useful for comparative purposes with past years data and may indicate catch trends in specific rivers or throughout Wales as a whole, however their relationship to stock size is unknown.

The reported rod catches for both salmon and sea trout were poor in 1989 in comparison to previous years ; the net catches showing little change from the 1988 figures. Whilst there have been many explanations offered for this fall in the rod catch, the most important factor is likely to have been the adverse climatic conditions during the summer of 1989. The rivers were low due to a lack of rain , conditions which failed to induce the in season runs of fish that we have experienced in past years, and in 1988 in particular.

The reminder system continues to be used to secure information from the many anglers who neglect to submit a voluntary return at the end of the season. Also included in this report for the first time are details of licence sales and revenue generated throughout 1989.

We are grateful to those who sent in details of their catches both pre- and post-reminder.
